

POGO[®] Pro+

POGO helps you know what's happening below the surface, across the entire green.

It brings pure science and precision to the art of turf management, using a patented sensor, automated analysis and patented *visual insight reporting.

POGO helps you achieve consistently perfect turf while optimizing water, fertilizer use and cultural practices.

- Uncompromising Precision and Accuracy, never needing calibration.
- Extended Multi-day battery.
- Integrated, professional-grade GPS receiver.
- Industry-leading warranty and support system, 24/7.
- Advanced Bluetooth for easy communication with your smartphone or tablet.

* Active TurfPro Subscription needed for use of POGO hardware, unlocking POGO's analysis and mapping platform

See exactly what your turf is feeling.

POGO Pro+ is part of the comprehensive POGO TurfPro Platform including POGO Mapper, POGO Weather, POGO lab analytics, POGO Logger and more!

Only POGO simultaneously measures all of the most influential factors that govern turf performance with a patented sensor and science-based analysis. Because it has its own pro-quality GPS, location-specific measurements are recorded at the sub-meter level so the areas of stress are pinpointed precisely on your turf.

Patented sensor precisely measures the right depth

The predominant moisture and salinity exchange within the rootzone of all types of turf systems occurs in the top 2.4" (6cm). Measuring this depth maximizes precision, focusing on what impacts the surface most.

Infrared surface heat index sensor

Instantly captures temperature with extreme precision.

Integrated wireless

POGO connects easily via Bluetooth to your smartphone or tablet.

Depth-specific to measure the most influential region of stress development in turf.

Future expandable for added optional sensors

Integrated, professional-grade GPS receiver

Records the precise location with all measurements for geospatial condition analysis, pin placements, sprinkler positions and patterns, area measurements, custom mapping and more. Note that for mapping-specific functions, POGO Mappers can be added on to your system to be utilized for mapping just about anything on your property.

TurfPro Mobile / TurfPro Cloud

The TurfPRO Mobile app turns your smartphone or tablet into a data acquisition and logging system that collects, displays and logs turf conditions measured by the wirelessly-connected POGO and other equipment.

The app displays real-time analytics and assessments of turf/soil moisture, salinity and temperature. This allows for timely reaction to conditions that could lead to costly problems.

Critical alerts advise you of conditions measured that require immediate attention, while you are on the course.

Easily synchronize collected data with TurfPro Cloud to unleash unprecedented insight and analysis and make it all available to the rest of your team, all from the turf.

Each new moisture, salinity (EC), temperature and salinity index measurement is color-coded to clearly display where your conditions are in relation to your customized target range.

Rather than just presenting raw data for you to interpret, TurfPro Cloud analyzes your data and presents it **visually**. See variations of moisture, salinity, temperature, ball speed, firmness, clipping yield and more across every zone of your property, and understand the effects of their interaction. This makes it quick and easy for you, and everyone else on staff to perform Best Management Practices (BMP's) by applying precisely **what, when and where** it's needed.
